

Task Manager Application

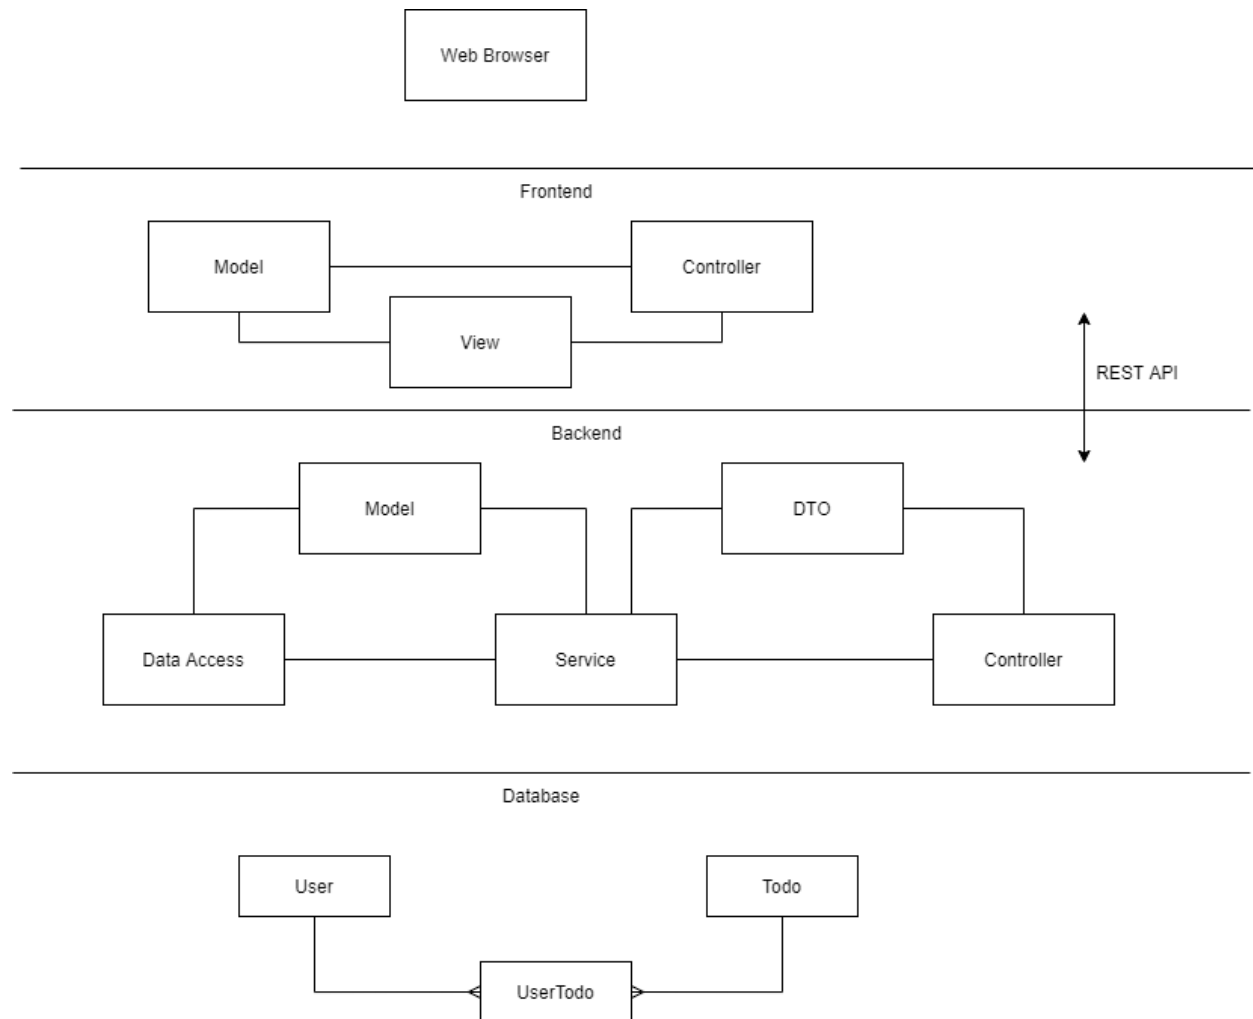

Task Manager Application is a simple application that is useful in organizing daily tasks. Each user will login with an account and then he/she can see, or add, or edit, or delete tasks (or todos). The application is created by Gabriel-Alin Florea in December 2020.

Some relevant screenshots present the main features of the application.

This application is a full-stack web application. It has a frontend developed using ReactJS, a backend developed using .NET Framework Core and a SQL Database.

The architecture of the application is as follows.

The backend provides services for frontend using a REST API. The frontend consumes this API in order to have the proper data on frontend.

The application can be developed in the future to be more useful for anyone who wants to organize his/her daily tasks in a better way.
